#### Interview Preparation

Lecture: 2- Recursion & Maps

#### Doubts from last class?

### Recursion

# PMI

# Lets do few problems

- Implement Merge Sort
- 2. Suppose you have a string made up of only the letters 'a' and 'b'. Write a recursive function that checks if the string was generated using the following rules:
  - a) the string begins with an 'a'
  - b) each 'a' is followed by nothing or an 'a' or "bb"
  - c) each "bb" is followed by nothing or an 'a'
- 3. Reverse a string using recursion

# Lets do few problems

- 4. Return all subarrays of an array
- 5. Count number of ways for a child to take n steps if she can take 1,2 or 3 steps at a time.
- 6. Using the phone keypad return all possible words that can be produced given input digits. e.g. 23 -> "ad, ae, af, bd, be, bf, cd, ce, cf"
  - a) Instead of returning print all these

# Hashing

# Maps

```
class Map{
// accessor methods
int size();
boolean isEmpty();
Object get(Object key);
// update methods
void put(Object key, Object value);
void remove(Object key);
Object[] keys();
Object[] values();
```

#### Implement a Map using Linked List

- 1. Find
- 2. Add
- 3. Remove

# Any Other Options?

### Hashtables

#### Components of Hashtables

- Bucket Array
- 2. Hash Function
  - a. Hash Code
  - b. Compression Function

What if two keys map to same bucket?

#### Collision Handling

- Separate Chaining
- 2. Linear Probing
- 3. Double Hashing

# Running time for separate chaining?

- 1. Find
- 2. Add
- 3. Remove

# Load Factor and Rehashing

Thank you
